

bisetti®
Italy

Mechanism

A specific mechanism for pepper and salt to ensure an excellent performance . A 10-year warranty on mechanisms and related mechanical components for an equal long-lasting. The certainty to be supported by a 70-year history company.

The mechanism for pepper

The mechanism of Bissetti's pepper mill is made of hardened steel. The double row of rotor arranged teeth, holds and guides the peppercorns for a perfect grind. The zinc coating protects the grinding system from oxidation, ensuring the sharpening and wear resistance. All our mechanisms are guaranteed according to the EU and FDA food-industry regulations.

The mechanism for salt

The mechanism of Bissetti's salt mill is made of high resistance ceramics. All the metal components are made of stainless steel and aluminium in order to resist to corrosion. All our mechanisms are guaranteed according to the EU and FDA food-industry regulations .

NEVER GRIND WITH EMPTY MILL

Knobs

The adjustment of the knob allows to set the desired grinding of the pepper and salt grains precisely. The knobs have engraved the letters P and S. The engraving allows a long duration of the letters, which will always be clearly recognizable, even after several years. Despite the small size our knobs are a very important element of our mills both for their distinctive features in shapes and model as well as for their nice design and top quality.
